

STORAGE

Cabinets are designed and constructed to limit the internal temperature to not more than 325°F (163°C) when subjected to a 10-minute fire test using the standard time-temperature curve as set forth in the NFPA 251.

To protect people and property from fire risks associated with volatile liquids, store flammable fuels, solvents, and chemicals in specially designed fire resistant safety cabinets. All Justrite safety cabinets meet OSHA and NFPA specifications, and most are independently tested and approved by FM Global.
